

Clownfish

A layer of mucus on the clownfish's skin makes it immune to the fish-eating anemone's lethal sting.

Scientific Name: *Amphiprioninae*

Average Length: 11 centimeters

Average Lifespan: 7 years

Habitat: *Tropical coral reefs*

Bright orange with three distinctive white bars, clown anemonefish are among the most recognizable of all reef-dwellers. They reach about 11 centimeters in length, and are named for the multicolored sea anemone in which they make their homes.
